ready2run®

EFFICIENT AND EFFECTIVE IMPLEMENTATIONS WITH READY2RUN® FROM NTT DATA

ready2run® Benefits

- Accelerated global design that focuses on adoption by local organizations

- Surrounding the technology with HR processes, standards and policies

- Reduced risk through early identification of decision points and change impacts

- Reduced effort required for technical design and realization, leading to maximum focus and effort on the business transformation and user experience

- Reduced reliance on limited internal resources

State-of-the-art Human Experience Management (HXM) Software

SAP's cloud-based SuccessFactors software helps you streamline your global HR activities as you source candidates, manage existing talents, reward employees, and more. You can benefit from a large collection of modules and functionalities, configurable to your needs, while taking advantage of the latest technology.

Turn Your Implementation Upside Down

The most successful technology projects all have a common theme: understanding the technology in the context of the organization and how it will be used by the business.

Setting the business context increases user adoption and protects your ROI.

This is why we developed ready2run®.

SAP SuccessFactors Implementations Using ready2run® From NTT DATA

ready2run® is both an approach and a series of accelerators that reduce the time needed to get your technology in place. Instead of spending time describing what most HR functions are doing anyway, we focus on the things that make you unique.
We guide you so you can avoid technology decisions that may have unintended business consequences.

We help you realize your desired new way of working.

And with a more efficient technology implementation, you can concentrate on the business and organizational impact of the transformation – keys to your project's success.

What You Get

Based on more than 20 years' experience implementing HXM solutions, ready2run® has everything you need for an efficient and effective implementation:

- Best practices, tools and content

- End-to-end HXM process maps aligned with SAP SuccessFactors

- Full solution configuration (template) for each module, including relevant localizations and translations

- Fixed implementation timeline and pricing

Implementation Methodology

ready2run® pairs the SAP Activate methodology with an iterative approach that results in a fast implementation with more effective, more focused customer effort. This approach also fits perfectly in an agile framework. Your team gets knowledge and hands-on experience of the solution from the beginning, via workshops and ongoing tryout, testing and self-education.

Beyond Training

NTT DATA recommends using a Digital Adoption Platform (DAP) such as SAP Enable Now, fully integrated with our ready2run® solution.

A transparent layer overlays SuccessFactors and provides context-sensitive visual cues when users need them to help complete tasks and drive the users to action. This reduces the need for traditional training and eliminates the need for user guides.

A ready2run® project takes less time, with less risk and less cost.
